**DETAILED ACTION**

***Allowable Subject Matter***

Claims 16-17, 3 and 7-14 have been renumbered as 1-11 respectively.

Claims 1-11 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Andersson et al, US Patent No. 6,240,125 B1 disclose "Method and means for frequency hopping in a FDMA or TDMA or CDMA radio communication system". Ueno, US Patent Application Publication No. 2003/0022692 discloses "Method, wireless network system and base station thereof for controlling power to send radio waves from a base station connected with a network system". Both Andersson and Ueno do not do not teach or fairly suggest the following features, which are recited in the independent claims 1 and 2:

A base station apparatus for communicating with a plurality of subscriber stations on a TDMA wireless communication manner, comprising:

an interference time slot database for registering/storing thereinto a communication time slot in which interference happens to occur; and a TDMA control unit for executing reallocation/rearrangement of time slots communicating with the respective subscriber stations in response to a change in a traffic based upon the interference time slot information of the interference time slot database;

wherein when interference is detected in a time slot received from a subscriber station, interference time slot information about said time slot in which interference is

Art Unit: 2667

detected is registered into said interference time slot database; the time slot reallocation/rearrangement are carried out based upon registered information of said interference time slot database such that said time slot in which interference is detected is reassigned to one or more time slots where no interference has been detected; and also time slot reallocation/rearrangement information is transmitted to the respective subscriber stations, and

(a) wherein time slot allocations/arrangements of all respective ones of said plurality of subscriber stations are changed once each super frame of a TDMA frame transmission structure, and wherein said base station transmits to the respective subscriber stations subsequent time slot reallocation/rearrangement information containing new time slot arrangements, over a plurality of frames within a super frame period as recited in claim 1; or

b) wherein a service area of said base station is subdivided into a plurality of sectors, and wherein said TDMA control unit executes time slot reallocation/rearrangement first to subscriber stations in sectors where no interference has occurred, and then to subscriber stations in sectors where interference has occurred as recited in claim 2.

Claims 3-11 are allowed for reasons given in the previous action filed on 06/15/2004.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2667

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
